In a special 'Strategies for PEDV Control' presentation at the 2009 Pig Summit in Lexington, KY, Dr. Tom D. Perry, Iowa State University Extension veterinarian and program leader for the PEDV Eradication Program, will be presenting state and Federal livestock producers with strategies for managing the challenge of PEDV in swine herds. Dr. Perry will share the results of recent Iowa State University and USDA research and provide insight on how Iowa State University has successfully combined the removal of pigs with PEDV control programs in seven counties to eliminate PEDV in Iowa. While the presentation will be a general overview on these strategies, the information provided will be quite useful to Iowa State University researchers and livestock producers alike. Dr. Perry has been working with Iowa State University scientists and swine veterinarians in a program to eradicate PEDV from the swine industry since the disease first appeared in the U.S. in February of 2009. Dr. Perry has gained extensive experience in PEDV control programs and the company of his colleagues to eradicate this viral disease. He is also a member of the Iowa State University College of Veterinary Medicine's Pig Industry Division. Dr. Perry earned his Ph.D. in Animal Pathology at the Iowa State University College of Veterinary Medicine in 2000. Perry also serves as the Iowa State University Extension's Swine Veterinarian. He provides general practice and specialized services in swine and porcine medicine, including medical problems caused by pigs, such as high-output udder infections and pneumonia, and enzootic pneumonia (EP), a disease that causes respiratory distress in pigs. "Dr. Perry's discussion will provide a 'how-to' outline of how we've moved forward in developing disease control programs," says Agriculture and Natural Resources Director J.D. Clark. "It's important that we take advantage of the wealth of knowledge available to us and share that information with Iowa producers who are implementing disease control programs. We are always seeking advice and ideas to help our partners in the industry." PEDV is a contagious, highly contagious disease of swine. The virus has been prevalent in the Midwest for more than three years, and has resulted in a 50 percent increase in the average cost
