com). The app is a prime example of what's wrong

with modern media, the fact that everything has to be sold to us so that we buy it doesn't just apply to computers, it applies to cars and even clothing. Instead of spending \$500 on an ipad, most people would rather spend \$10 on an app. If you're

willing to spend \$50 for an app, you may have the opportunity to make \$10 back on every person that uses your app. Apps like Cyclebook has a very high chance of returning a profit, so even if you only sell a few thousand apps you can make a

significant amount of money. Other tools: GPS tracking apps can help locate your stolen bike, so you can recover the bike, or if you've lost it contact your insurance company. Adafruit's GPS tracker (or similar) uses an arduino to connect

with an adafruit GPS module (or similar) that is attached to your bike, this will allow you to track the location of your bike and even receive email alerts if it's stolen. Cyclepark is a popular bike parking app for iOS, it allows you to add and

mark your bike in your local area, as well as the option to receive text or email alerts when it's stolen. It's an easy way to locate your bike, however it's limited to just a few cities. Location based services have become very

popular recently. There are a few services out there such as Ebookers, TaskRabbit, or the new check-in based services that include Foursquare, Spotify, or Gowalla, which will allow you to check in at certain locations and share your

location with friends.
Advantages: Location
Based Services like
Ebookers have the best
chance of returning a
profit, since you can sell
your location data to
businesses. Location
Based Services also have
the advantage that if your

bike is stolen they will know exactly where it is. Disadvantages: Ebookers is a bit limited, only a few cities are supported, so if you are planning to travel a lot you may have to pay for an additional subscription. TaskRabbit is a bit of a hit and miss,

in my experience I've had
the good service, but I've
also had the horrible
service where you

BikeCAD is the bike design software used by frame builders and fitters. This bicycle design software was designed using CAD (computer graphics).

BikeCAD is one of the BikeSoft products.

BikeCAD was originally

designed for use with 3D printers and now includes several custom features that were previously only used in CAD. BikeCAD now includes a graphics editor for digitally creating bike models with a 3D printer.
