
Sprint Layout 6 20

The buttons and elements are just intuitively easy to use. You can find the settings via the shortcuts menu. (See the first preview to see all available modes.) . sprint layout 6 20 flat You may want to have a look at the two videos on the Sprint-Layout web page: It contains all the information about the product and the features. This site is for new and experienced users. It is strongly recommended to watch the „How-to“-video on YouTube, because it contains all the relevant information. sprint layout 6 20 individual boards A scenario from my work flow: More information about the software can be found in the end of the article. Usage To start with the software you need to import a Gerber file. The software will launch automatically. After you entered the path to your imported file, you have to define the size and the position of the layout. Click on the „Add to print-board“ button to find your preferred place on the board. At the top right corner there are four shortcuts (also shown in the video): For the most used settings click on the menu and then select your desired element (or change the current one). At the bottom left corner you have the print-settings: In the print-settings you can edit your print settings like the color of the text, the number of copies, the page setup, and so on. Start drawing. At the bottom right corner you can access the shortcuts again. To finish your layout click on the „Start print“ button. After the print is finished you have two options: You can import the file to your drawing software or you can print it with the printer software. You can open the file directly with the drawing software and edit your board and elements. Let's have a look at a real project with a prototype on which you can find all the features in action. After you have installed the software, a design template is created in the backend. You can then find it under the Design Templates in the menu. You can also add files and folders to this template, for example you can add files to the „Gerber-Layer“.
