October 9, 2011 Elearn To develop Alfa Romeo Giulietta use your iPad/iPhone (version 2) and your current Alfa Romeo Giulietta manual (incl electric scheme) as your development material. My development boards are a Macbook Pro and an iPhone 2G. As example for Alfa Romeo Giulietta, I built a JTD2/CF6 install. My alfaimo has the Alfa Romeo Giulietta 2.0 JTDm2 euro 6 (CF6) engine. I have a half copy of Elearn (online these days) but this is only for the older Giulietta. Installation For that, you need the commercial Elearn application from This application has an iPhone and iPad version. You will need the paid version (there are cheaper free versions, but they are for example. In this installation guide, we will explain how to install Elearn on both the iPhone and the iPad. Both have their own installation procedures. For the Installation iPhone Download and install the iPhone version of Elearn from Download the latest Elearn application from the App Store. Next the application needs to run a setup. open the application after download and close iTunes. Open the application and choose the "Install Elearn" option (which is under "Extra"). Click "Install Elearn" and wait until the installation is complete. The application will run a setup automatically (if you have not started it before). This setup will create the elearn folder in your applications folder. If you want to start the application directly, just open it and it will start the application automatically. After the installation, you can start to use the application. Installation iPad Open the application from the App Store. The application needs to run a setup. open the application and choose the "Install Elearn" option (which is under "Extra"). Click "Install Elearn" and wait until the installation is complete.
