How to read long list of file in CSV (comma separated value) format in python? A: The beauty of python is that you can solve all your problems in one single line of code: `import csv with open("output.csv", "w", newline=") as myfile: wr = csv.writer(myfile, delimiter=',') wr.writerows(my_long_file)` Note that there is no need for a for loop, as you can simply write the rows one after another using `writerows`. [Ocular manifestations in primary aldosteronism]. To evaluate the association between primary aldosteronism and exudative age-related macular degeneration (AMD), and the role of primary aldosteronism in the pathogenesis of AMD. This was a case-control study including 33 patients with primary aldosteronism. Case control study. All patients underwent standardized ophthalmological examination. Controls were matched for age and sex to the cases. The characteristics and treatment of patients with aldosteronoma were compared with the controls. In patients with primary aldosteronism, association between primary aldosteronism and exudative AMD was examined. Nine of 33 patients with primary aldosteronism were older than 70 years and had exudative AMD. The comparison of the patients with primary aldosteronism to the controls revealed a significant association between the conditions. The average duration of primary aldosteronism was 25.4+/-21.6 years. The presence of exudative AMD was associated with the duration of the disease. In addition, the presence of exudative AMD was associated with higher aldosterone levels (168.0+/-85.4 vs. 107.1+/-52.9 pmol/l, P=0.006), and it was associated with higher glucose levels (7.0+/-1.6 vs. 4.7+/-1.3 mmol/l, P=0.007). The presence of primary aldosteronism is associated with exudative AMD. The presence of exudative AMD is associated with higher aldosterone levels and higher glucose levels. These results suggest a potential pathogenetic role for aldosterone in the pathogenesis of AMD.// Targeted by JavaCPP version 1.5. 2d92ce491b
