champion of the Game Science community"? Here is the context. A: A champion is someone who has achieved a high level of skill or performance on a game. He/she is officially the top level of achievement for that game. In your example: The question in the headline says that someone has a championship trophy, however it is not referring to a person's skill as a player of the

game. It's referring to their achievement in the field of game research. In particular "game science" in the sense of "designing or developing games for research." The full reference to the person's achievement is this in the article: Early in his career, Paul was already a champion of the Game Science community. This is as true today as it was when he first realized the possibilities

for scientific research in computer games. It's this kind of dedication that makes Paul's path so impressive. I have no idea what the meaning of "champion" is in the context of chess, but I suspect it is something like the title "pawn of the other person" that kings are frequently said to have.
