Other CAD software The following is a partial list of CAD software that includes AutoCAD support. Notable examples of commercially successful Autodesk CAD applications include Autocad MEP, Autocad Architecture, AutoCAD Architecture for Digital Design, AutoCAD Electrical and AutoCAD Civil 3D. The first version of Autocad MEP, or mep, was released in 1989. These products have been used in a variety of construction and infrastructure projects, including transportation, airports, dams, colleges, residential, and schools. A project-specific Autodesk MEP model can be edited in a 3D modeler, AutoCAD or a web browser. Space-based applications Autodesk has been working on space-based applications for many years. In 1996, Autodesk's GeoWorks GIS platform, originally called "AutoCAD on the Planet" was sold to Trimble and was re-branded Trimble GeoVista. This application was designed specifically for the Windows platform and was used for the NASA World Wind project. Autodesk's collaboration with NASA on this project led to a deal with NASA to port NASA's terrestrial GIS project to AutoCAD and was released in 2005. The first version was released on the NASA World Wind for the Windows platform. In 2007 NASA World Wind version 2.0 was released for Mac and Linux. Several earlier applications were released under the Autodesk Map 3D brand. These applications included Autodesk Map 3D for Windows, Autodesk Map 3D for Mac, Autodesk Map 3D for Linux, Autodesk Map 3D for Windows Mobile, Autodesk Map 3D for Mac Mobile and Autodesk Map 3D for Windows Mobile. Autodesk Map 3D was one of the first mobile GIS applications. The initial goal of Autodesk Map 3D was to deliver "universal" mobile GIS. For reasons that are not clear, Autodesk discontinued the Mobile version of Autodesk Map 3D. In October 2015, Autodesk acquired Conexant Systems, a technology company located in Sunnyvale, California. This acquisition included Conexant's intellectual property for the Navier–Stokes and Ansys engineering turbulence software, including its Geophysical Flow Solver (GFS) and sub-grid scale (SGS) models for CFD. These models are commonly used for modelling fluids in industrial applications. 5b5f913d15
