Open the Paths panel by clicking on the Paths icon in the bottom toolbar. The Paths panel is a panel in the bottom right. To choose a path, click on a path in the Paths panel and drag it to an area that you want the path to be. Selecting a path Now, you need to click on an object in the image you want to include in the new document. Click on an object in the photo to select it. You can also double-click on an object or the image area. Objects in a photo in the image area You can also drag and drop the object from the library to the image area. Drag and drop an object to the photo area. Your selected objects will be inserted. Adding a photo effect to a photo Add a photo effect to an image There are several photo effects that can be added to an image. You can see more photo effects here. Q: Is a given asymptotic estimator a consistent estimator for a finite population model? I am given a finite population model, $$\Pr(A)=\frac{1-p}{1-p+e^{-k\mu}}$$ where μ is the overall population prevalence and p is the prevalence of cases in a given age group j: $p(j)$. The values p and k are fixed. Also given a sample of size n, $\overline{p}(j)=\frac{1}{n}\sum_{i=1}^n p(j_i)$, $\overline{\mu}=\frac{1}{n}\sum_{i=1}^n\mu_i$ and $\hat{\mu}=\overline{\mu}+\overline{\mu}\cdot \frac{r}{n}$ where r is a constant. I want to show that $\hat{\mu}$ is a consistent estimator for μ. Since the overall prevalence μ is a finite population quantity, if I want to do a Δ-method to show asymptotic consistency, I have to assume that the sample size is large enough that $\overline{\mu}\sim\mu$. If this is true, it is not too difficult to show that $\hat{\mu}$ converges to μ. However, I am not sure whether it is true. A related question is whether $\hat{\mu}$ is an asymptotically unbiased estimator. From my previous question, we know that $\overline{\mu}$ is not. But is it the case that $\overline{\mu}\cdot\frac{r}{n}$ is? A: If $r=1$ and $\overline{\mu} \to \mu$, then $\overline{\mu} \cdot \frac{r}{n} \to \mu$ as $n \to \infty$. Hence, if $\overline{\mu}$ and $\overline{\mu} \cdot \frac{r}{n}$ are both non-negative, then $$\overline{\mu} \cdot \frac{r}{n} \to \mu \iff \overline{\mu} \to \ $$
