When editing photos, it is most common for beginners to only use the tools to edit color balance, contrast, shadows, and highlights (see Book II, Chapter 5). Photoshop Elements is considered a hobbyist and middle-school app for people without an extensive knowledge of editing and graphic design in a professional setting. Photoshop is the most widely used photo editing software that every Photoshop users use to retouch and edit images. For such simple applications as the logo design Adobe Photoshop is one of the most professional tools used by graphic designers. During the last few years since its release Adobe Photoshop is considered the most versatile and powerful photo editing software. Although no longer the dominant tool for creative work, Adobe Photoshop is still the go-to tool for all but the most serious photographers and graphic designers. Photoshop's superior editing powers are matched by the program's streamlined interface, fast performance, comprehensive features, and superb tools. The first major revision of Photoshop, Adobe Photoshop Elements, was released in 2003 as a relatively low-cost program for those who didn't have $900 (and up) to upgrade to Photoshop on the desktop. Photoshop CS3 took the release and further developed by adding many useful features and options. Adobe Photoshop Elements 13 with its first major update, Photoshop Elements 14, is the first major update in a decade. Although it has more functions than its predecessor, Photoshop Elements is still a good alternative to Adobe Photoshop to edit images, enhance picture quality and add fun to your images. From the View menu, select Edit ▸ Adjustments ▸ Levels, then click the little triangle to the right of the levels meter to reveal the control boxes. Here you can change the Exposure, Highlights and Shadows controls. You'll find that Photoshop Elements is pretty straightforward for beginners when editing your photographs, but keep in mind that there are several features and options that you can set and control that will help you get better results more quickly. For example, by switching the mode setting from Highlights to Sharpen, you'll see that the image displays with a grainy effect, a little like the effect you see when using a grainy film in your camera when you use the Creative Auto mode. Like Sharpen, however, you'll also find that this shows you details much more clearly. If you want to brighten shadows, clicks on Image ▸ Adjustments ▸ Brightness/Contrast. The Opacity slider is on the left and the Brightness/Contrast option is on the right. 05a79cecff

Q: Bypass firewall for specific ip address (or) entire server We have a windows server which is connected to internet through Cisco firewall. In our case we want to allow our system admin to connect to our server but the server is not allow to access to the internet(browser). In this case how should he connect to the server through the internet?? In other cases we have a ubuntu server which is not allowed to connect to internet.In this case I want to access the server from outside world. How should we do that?? Is there any way we can bypass firewall for some IP address? A: If you want to allow your admin to access your sever remotely only from one computer, then either disabling the firewall entirely or restricting the remote access to that system will do it. If you want to do it on the fly, the simplest way might be to have the admin do a port forwarding on the firewall to the server. If they do this with the following command on the server, it will start listening on 192.168.2.1 at the given port: netstat -anp |grep LISTEN |grep :40000 For example: netstat -anp |grep LISTEN |grep :40000 tcp 0 0 192.168.2.1:40000 192.168.2.116:73 TIME_WAIT - tcp 0 0 192.168.2.1:40000 192.168.2.116:83 TIME_WAIT - tcp 0 0 192.168.2.1:40000 192.168.2.116:64 TIME_WAIT - tcp

The plugin sends a email to the admin, which the user got, but it is not the email I want. Can I get the actual email the user got from the email sent by the plugin? A: The email sent by the plugin is from the theme/plugin's email address, unless the user edits it. As for what the email the user gets is, you'll have to check for $_POST['email']; Cable TV Puts Household Net Usage in Focus WEST HOLLYWOD, Calif. — After returning home from vacation, Jim Gates looked forward to relaxing. But his 13-year-old son Steven had used up all his available time watching TV. Watching something on television, Mr. Gates estimated, takes longer than reading a book or magazine. So he did his best to resist the temptation to turn on a TV set. "It's fine for you to watch TV, but I can't let my kid watch too much television," Mr. Gates said. "I want to spend time with him, just the two of us." Dedicated viewers of cable TV programs find ways to reduce their time viewing, but in recent months,
