OWN COPY OF INTERMEDIATE ACCOUNTING NOW!: PART I - Good morning, today we're going to
review the math behind simple interest, as introduced in the last video. Simply put, if you can divide
your payments into two parts, you can make it so that the bigger part comes due at the end of the
month. So this can be written as a simple interest account, where you can use that simple interest
math to find a calculator. Anyone who's used that can find the calculator, whether they got charged
a simple interest or whether they paid it on a regular interest account. And the math behind this is
it's a standard, conventional definition of simple interest. 0:38 Films Part 5 - Lecture 8 - Financial

Hello all, I have just installed the Vue Pro Xpress 3.3.1 (using the easy way) and am having issues changing the most common options used in Vue. None of the sliders will respond and I'm not sure where to begin to change them. I'm not looking for someone to go through the whole installer and change them for me, I just need to get started. Any help would be greatly appreciated. A: The applications have been updated to support the new 3.3.1 version, so there is a new setup configuration. The old 2.0.5-built in version of Vue does not respond to the settings that are normally found in the Panel configuration. If you check System Settings->Ease of use->Ease of use->Sidebar you will see the new setup configuration and both the vertical and horizontal slider. If you access your plugins->Ease of use and select configure custom settings you will see both the horizontal and vertical sliders available for you to modify. I started a new thread in the addon repository that explains how to go through the new 2.0.5-built in configurations and changes the sliders on there as well. This may be of help to you as well as many others. Good luck! A: In the very latest version of Vue is a new "save and edit your customizations" button. That basically creates a.wpmu file in your wp-content folder. So if you want to add a button to your sidebar, it seems that is a place to start. So, I usually download 2.9 to 2.8 versions and then download the Custom Theme Editor. Drag and drop the download into wp-content, as well as the file at /wp-content/themes/custom, and run the custom theme installer. I then usually delete the.wpmu file that has been created and then it puts the button back.
