Photoshop does not offer any way to reduce texture, only to add it. This is an invaluable tool for one who needs to get rid of or fix a lot of dust, scratches, and flaws. Q: MySQL database in localhost works in a server in Web Server in localhost I have a website in PHP where I use a MySQL database. In my localhost all works perfectly, all the stuff (login, register, read, update and delete) are perfect. But when I put in a server in Web Server in localhost, all works partially. For example, the login doesn't work and I get this message in the login: Warning: mysql_real_escape_string(): Access denied for user 'root'@'localhost' (using password: YES) in /home/myserver/public_html/login.php on line 22 Warning: mysql_real_escape_string(): A link to the server could not be established in /home/myserver/public_html/login.php on line 23 Warning: mysql_real_escape_string(): No connection could be made because the target machine actively refused it. And I get this message in read, update and delete: Warning: mysql_query() expects parameter 1 to be resource, boolean given in /home/myserver/public_html/tables_read.php on line 18 Warning: mysql_fetch_assoc() expects parameter 1 to be resource, boolean given in /home/myserver/public_html/tables_read.php on line 19 Warning: mysql_query() expects parameter 1 to be resource, boolean given in /home/myserver/public_html/tables_read.php on line 20 Warning: mysql_fetch_assoc() expects parameter 1 to be resource, boolean given in /home/myserver/public_html/tables_read.php on line 21 I hope you can help me PS. I'm using MAC A: You probably need to pass the username and password as parameters in the query. Here's an example of what the statement should look like. `$sql = mysql_query("SELECT username, password FROM users WHERE username = '$username'") or die(mysql_error());` You might have also been connecting to the database over the wrong port. Try this `$con = mysql_connect('localhost', 'root', '') or die(mysql_error()); // Check connection if (!$con) { die('Could`

$\int \frac{d}{dx} \phi(x) + 2\mu \phi(x) dx$ for $\lambda \in [0,1]$, $\mu \in [-\sqrt{2}, \sqrt{2}]$, and $\phi(x) = \sqrt{x}$. Consequently, the graphs of $L_{\lambda \cdot \mu}$ on $[-1,0]$ and $L_{\lambda \cdot \mu}$ on $[0,1]$ have inflection points at $x=0$ and $x=-1/2$, respectively. The Haar basis ----- We have the following generalization of Proposition [prop:haar]. [prop:haar_general] Let W be an orthonormal sequence of complex-valued functions. Let $\gamma, \kappa \in \mathbb{R}$ such that $\int_0^{+\infty} \tau^{-\kappa} |W(\tau)|^2 d\tau < \infty$ implies that $\int_0^{+\infty} \tau^{-2\kappa} |W(\tau)|^2 d\tau = \int_0^{+\infty} \tau^{-2\kappa} |W$
